练习一 质点运动学

5,
$$\vec{a} = -8\vec{j}$$
 (m/s^2) , $\vec{r} = (5+2t)\vec{i} - (4t^2+10)\vec{j}$ (m) 6, $\sqrt{2x+8x^3}$ (m/s)

6,
$$\sqrt{2x+8x^3}$$
 (m/s)

7,
$$x = (y-3)^2$$
, $\vec{v} = 16\vec{i} + 2\vec{j}(m/s)$, $\vec{a} = 8\vec{i}(m/s^2)$,

$$\vec{a} = 8 \vec{i} (m/s^2)$$

8.
$$\Re: (1) \ a = \frac{dv}{dt} \Rightarrow \int_{v_0}^{v} dv = \int_{0}^{t} a dt = \int_{0}^{t} (6t - 8) dt$$

$$\Rightarrow v - v_0 = 3t^2 - 8t \Rightarrow v = 3t^2 - 8t + 10 \quad (m/s),$$

(2)
$$v = \frac{dx}{dt} \Rightarrow \int_{x_0}^{x} dx = \int_{0}^{t} v dt = \int_{0}^{t} (3t^2 - 8t + 10) dt$$

$$\Rightarrow x - x_0 = t^3 - 4t^2 + 10t \Rightarrow x = t^3 - 4t^2 + 10t + 1 \quad (m)$$

9、解: 如图, 人的速度:
$$v_0 = \frac{dx_A}{dt}$$
, 人头影子移动的速度: $v = \frac{dx_B}{dt}$ 。

$$\overline{\text{m}}\colon \ x_{\scriptscriptstyle B} = \frac{H}{H-h} x_{\scriptscriptstyle A} = \frac{H}{H-h} v_{\scriptscriptstyle 0} t \Rightarrow \frac{dx_{\scriptscriptstyle B}}{dt} = \frac{H}{H-h} \frac{dx_{\scriptscriptstyle A}}{dt} \,, \qquad \text{\mathbb{H}:} \ v = \frac{H}{H-h} v_{\scriptscriptstyle 0} \quad .$$

10,
$$\Re(1)\theta = 2 + 4t^3$$
 $(rad) \Rightarrow \omega = \frac{d\theta}{dt} = 12t^2(rad \cdot s^{-1}) \Rightarrow \beta = \frac{d^2\theta}{dt^2} = 24t(rad \cdot s^{-2})$

$$\Rightarrow a_{\tau} = R\beta = 2.4t (m \cdot s^{-2}), \quad a_{\eta} = R\omega^{2} = 14.4t^{4} (m \cdot s^{-2})$$

则
$$t = 2s$$
 时, $\Rightarrow a_{\tau} = 4.8 (m \cdot s^{-2}), \quad a_{\eta} = 230.4 (m \cdot s^{-2})$

(2) 加速度和半径成 45°角,即
$$a_{\tau}=a_{n}$$
,即 $2.4t=14.4t^{4}$ \Longrightarrow $t^{3}=2.4/14.4=1/6$

代入得:
$$\theta = 2.67$$
 rad
